

Value Proposition

Unlocking team velocity while ensuring enterprise-grade stability and control.

www.fractal.cloud

Fractal Cloud

The Benefits

Run Anywhere

Multi-Cloud
Templates

Run Securely

Built-in Security and
compliance

Code Faster

Simplified Cloud Ops,
faster time to market

Run Anywhere

Multi-cloud becomes an operational reality.

A "Fractal" is **cloud-agnostic**. Your Platform Team defines an infrastructure blueprint **once**.

That single blueprint **can be deployed across Cloud Providers** without manual adaptation or re-writing.

The Value:

Strategic Freedom

You can choose the best-of-breed cloud for each specific workload

Reduced Dependency

You avoid being locked into one vendor's proprietary services and tools.

Efficiency

You gain negotiating power and can enable cross-cloud disaster recovery strategy.

Run Securely

Security and compliance are no longer the final step.

Every "Fractal" your Platform Team builds, already includes your security best practices and compliance rules (e.g with frameworks like CAF or AWS Well-Architected). When a developer deploys a Fractal, they are deploying a component that is 100% compliant by design.

The Value:

Eliminate Human Error

You remove the #1 cause of data breaches manual misconfiguration.

Enforce Consistency

You guarantee that 100% of your infrastructure follows your exact rules.

Pass Audits Instantly

You can prove compliance immediately, as it's built-in, not a manual checklist.

Code Faster

The most direct **business result**: accelerate your **time-to-market**.

The ROI

The Developer's daily time-to-infrastructure collapses from **days to minutes**.

This is the most direct and measurable ROI.

Frictionless Adoption

We don't ask your team to learn a new, proprietary language (DSL).

Fractals are accessible via the tools they already love: **SDKs, API, CLI**, and a simple **UI**

The Value

Your most expensive engineers stop fighting infrastructure complexity and start focusing on what matters: **building your product**.

The Main Outcome

A Win Across the [Organization](#).

- **For Application Teams:** Ready-to-Use Infrastructure
Get the speed they need with on-demand, self-service components.
- **For Infrastructure Teams:** Simplified Governance
Regain control by embedding security and compliance rules into reusable blueprints.
- **For the Business:** A Secure Foundation
Run a secure, compliant, and cost-efficient infrastructure on any cloud.

The Business Impact

Fractal Cloud: turning bottlenecks into [breakthroughs](#).

This isn't theoretical.

We have seen clients **reduce** this **infrastructure wait time by over 90%** turning "**Days**" into "**Minutes**".

This agility allowed them to **migrate entire workloads** (even to **Sovereign Cloud**) in **minutes** following a strategic decision.

Few More Metrics

0 mins

Time to deploy infrastructure

90%

Maintenance overhead

30%

Cloud cost

70%

Vendor-specific work offloaded

10x

Infra code footprint

100%

Cloud portability

The Transformation

From **Cloud Chaos** to **Control**.

Before (The Chaos):

A model characterized by chaos: slow, manual and risky configuration for a single vendor.

After (With Fractal Cloud):

A new model with a parallel flow: fast, automatic, where compliance is "by design," and you have true multi-cloud freedom.

It's the shift from chaos to control.
